It has been suggested by some of our members to give a listing on all the books on oaks. We do not have a complete catalog at the moment and there might be some obscure monographs in university libraries that we are unaware of. If you know of any, please let us know. Currently our list of books on oaks:

3.) *Year of the Oak, Fremontia*, Vol. 18, No. 3, California Native Plant Society, July, 1990. An excellent journal discussing some of the problems of oak habits in California and their regeneration. We have reprinted some of their articles.

Mr. J. R. P. van Hoey Smith has informed us of an old publication in French, *Monographie des Chenes* by Camus. This publication is quite good but difficult to obtain and expensive.

Lastly, there is the magnum opus by Bean, *Tress and Shrubs Hardy in the British Isles*, which have a good discussion of European species, but much of the Latin nomenclature is out of date. Apparently, there is a revised edition, but I have not been exposed to it as of yet.
